

## **Galaxy Scaling Relations in the SDSS and their Dependence on Environment**

**Guinevere Kauffmann**, Max Planck Institute for Astrophysics

**Abstract** I will present the relations between stellar mass, star formation history, size and internal structure for a complete sample of 122,808 galaxies drawn from the Sloan Digital Sky Survey. I will also discuss how these relations depend on the environment of the galaxy and the implications of these findings for theoretical models of galaxy formation.
